

Step-by-Step Checklist: How to Create a Website in One Day

Step	Completed	Comments
1. Choose and register a domain name		
2. Select reliable hosting and connect your domain		
3. Install WordPress through one-click setup in the hosting panel		
4. Log into the dashboard and configure basic settings (site title, timezone, language)		
5. Pick a simple and responsive theme that fits your purpose		
6. Install essential plugins (SEO, cache, backup, drag-and-drop editor)		
7. Prepare core pages: Home, About, Services/Portfolio, Blog, Contact		
8. Add initial content: text, images, and a contact form		
9. Test your website on desktop and mobile devices		
10. Set up SSL certificate and check site speed		
11. Do final tweaks: add favicon, meta descriptions, sitemap		
12. Publish your website and share it with the world		

This checklist helps you keep track of every step. Mark tasks as complete and write comments to stay organized during the website creation process.
